to me

Dear Dr. Hadijah,

We would like to inform you that after the preliminary evaluation your paper is qualified for processing (reviewing). However, the manuscript does not respect the AACL formatting requirements. Please find the model on our website and replace each section with your text, leaving the footer exactly as it is, including the page numbering. Also, the references from the text and from the reference list must be adjusted according to the requirements.

Before proceeding to the review please consider that a processing publication fee of 250 USD is required. The average duration of the publication process is 10 weeks, but it can be reduced in exchange of a priority tax of 50 USD (<http://www.bioflux.com.ro/journal/>).

In case the manuscript is not published, the author or his/her institution is reimbursed (exceptions are made in the cases of poor feedback from authors or withdrawal/rejection due to multiple submissions).

I will be your editor and I will stay at your disposition for all the aspects concerning your manuscript.

Concerning the payment procedure, you will find all the details bellow and I would like to kindly ask you to send me the scanned receipt of the payment in order to start the publishing process. Upon reception of your payment receipt we will send you the invoice.

*1st payment option:*

Beneficiary:

Bioflux SRL

City: Cluj-Napoca ,

Country: Romania, European Union;

SWIFT CODE of the bank: BTRLRO22

Account USD:

RO68BTRL01302202L28614XX

Bank:

BANCA TRANSILVANIA

**Important!** When bank transfer is used to pay a publication fee, please choose the right option, which is "US"! (among the three options you have: Ben, Our, Us).

The option "Us" means that **all the transfer fees are at your charge**. Please note that in case you do not specify the "Us" option, the payment will not be valid.

*2nd payment option:*

via Paypal. If you can process such a payment we can start the online form.

If you prefer this option please let us know and we will send you the invoice via Paypal and afterwards you can process the payment.

For this payment option you need a credit card (international, non-iranian card). Please take into account that all bank taxes are in your concern.

We recommend not to send your manuscript to more than one editor, in order to avoid being double charged.

Do not hesitate to contact me for any kind of questions related to the process.

Thank you for publishing with us!

Kind regards,  
Editor AACL Bioflux  
Eniko Kovacs, PhD

<sup>1</sup>Muhammad Ikhsan Wamnebo, <sup>3</sup>Muhammad Yunus

<sup>1</sup>Department of Aquaculture, Faculty of Fisheries and Marine Sciences, Universitas Muslim Indonesia, <sup>2</sup>Department of Fisheries Resources Utilization, Faculty of Fisheries and Marine Sciences, Universitas Muslim Indonesia, <sup>3</sup>Department of Marine Sciences, Faculty of Fisheries and Marine Sciences, Universitas Muslim Indonesia.

Corresponding author: [siti.hadijah@umi.ac.id](mailto:siti.hadijah@umi.ac.id)

**Abstract.** Beloso fish (*Glossogobius* sp) or locally known as "bungo" is one of the freshwater fish of Tempe Lake. Less bony, thick flesh and tasty make it sought-after commodity in the local market. Although Beloso fish is ecologically and economically important, it has not been aquaculture yet. The wild population of Beloso fish is currently very concerning due to high fishing pressure to meet high market demand. In addition, introduced fish for aquaculture purposes such as common carp (*Cyprinus carpio*) into Tempe Lake threatens the existence of Beloso fish. The introduced fish causes pressure on native species either predation or competition. This study aimed to analyze the ecological sustainability status of fish beloso (*Glossogobius* sp) located in Lake Tempe. This study was conducted in three districts (Wajo, Soppeng and Sidrap), South Sulawesi. Five sites were used during study periods, including, the middle of Tempe Lake, the water entry of the Bila River, the water entry of the Walanae River, the water entry of the Batu-Batu River and the water discharge area to the Cenranae River. Sampling, measuring and weighing of fish sample were carried out for data collection. Rapid Appraisal Analysis (RAPFISH) was applied for sustainability analysis according to (Pattimahu, 2010). The indicators of ecological sustainability measured are Water quality, Frequency Distribution, Group of Age, Growth, Mortality, Exploitation rate. The result of Rapfish analysis is shows that the value of sustainability index for ecology dimension is at 32.68, which means less sustainable. The sustainability status of Beloso fish on the ecological dimension is classified into less sustainable.

**Key words:** Beloso fish, ecological dimension, sustainability, Lake Tempe

to me

Dear Dr. Hadijah,

Regarding your manuscript submitted to AACL Bioflux, the editorial team has some requests prior to acceptance (please see the attachment).

**Please note:** Always operate corrections/additions (or deletions) in the manuscript we are sending you, by **highlighting with a bright color** (for an easy identification). We never work on the manuscript you send back, just identify the corrections and operate them on our document (to avoid any undesirable accidental operations like changed page set up, otherwise the editors have to start all the work from the beginning, and we cannot ask them to re-check every manuscript word by word to identify unmarked modifications).

Thank you for understanding!

---
