ABSTRAK

***Introduction**: Dental and oral health problems are a major problem in school-aged children. Nearly a third of Indonesia's population has dental and oral health problems. Efforts that can increase knowledge about dental and oral health are through health promotion using audio-visual media, counseling using creative media encourage students to study hard and optimally received the lesson. **Objective:** To determine the influence of health promotion using audio visual media in increasing dental and oral health knowledge of SDI students. **Method:** This type of research was a quasi-experiment with a pre-test and post-test group design and analysis using the Wilxocon test with a sample size about 48 students. **Results:** Based on the results of research entitled The Influence of Health Promotion Using Audio Visual Media in Increasing Knowledge of Dental and Oral Health at SDI Kampus 1 UNHAS. Based on a comparison using the Wilcoxon test, a p-value of 0.000 was obtained, namely less than 0.05 (p value <0.05) . This shows that the treatment given, namely Audio Visual Media, increases students' knowledge about dental and oral health after it is applied. **Conclusion:** There is any influence of increasing knowledge on health promotion using audio-visual media.*

INTRODUCTION

The condition of Indonesian people's dental Riskesdas data, there was a decrease in the number of dental and oral problems by 0.5%.

THE EFFECT OF AUDIO-VISUAL HEALTH PROMOTION MEDIA ON THE ORAL HEALTH KNOWLEDGE OF STUDENTS IN INPRES ELEMENTARY SCHOOL OF UNHAS CAMPUS I, MAKASSAR

KEYWORDS

Health promotion, dental and oral health

ABSTRACT

Background: Dental and oral health problems are significant concerns for health development, and one of them is the vulnerability of school-aged children to dental health problems. 57.6% of Indonesians have dental and oral problems, and 67.3% of 5-year-old children have a high caries rate. Efforts made to increase knowledge are by providing health education. One thing that needs to be done is to promote health using health promotion media. One of the media commonly used for health promotion is audio-visual media. Counseling using creative media can make the students study harder and receive the material they want. **Research Objective:** To determine health promotion's influence using audio-visual media in improving dental and oral health at SDI Unhas Campus 1. **Materials and Methods:** This type of research was quasi-experimental with a pre-test and post-test group design and analyzed using the Wilcoxon test. **Result:** Based on a comparison using the Wilcoxon test, it shows a p-value of 0.000 which is smaller than 0.05 (p-value < 0.05). **Conclusion:** The results of this study measured students' initial knowledge before receiving health promotion about 95.83% were in the high category and 4.17% were in the low category. As for knowledge after receiving health promotion in posttest abouth 97.82% was in the high category and 2.08% was in the low category. Next, knowledge of dental and oral health after posttest 2 treatment was 100% in the high category
